A006

Dear participant,

Thank you very much for your interest in taking part in this study.

The following survey is part of a data collection for my master's thesis in Psychology at the University of Vienna. Since your personal preferences are the focus of this research, there are no right or wrong answers.

Participation will take approximately 10 minutes.

If you have any questions or comments regarding the survey or the study in general, please feel free to contact me at: a12143387@unet.univie.ac.at

Růžena Ceral, M.Sc., University of Vienna, 2025

Information on Data Protection

Your data are only collected and processed on the basis of legal provisions (section 2f, para. 5 of the Austrian research organisation act, Forschungsorganisationsgesetz, FOG). The data can be consulted by the supervisor for the purpose of performance assessment. In principle, it is permitted to store the collected data for an unlimited period of time according to article 89, para. 1 of the GDPR. For general legal questions regarding the GDPR/FOG and research conducted by students, please contact the Data Protection Officer of the University of Vienna, Daniel Stanonik (verarbeitungsverzeichnis@univie.ac.at). You also have the right to lodge a complaint with the Data Protection Authority (for example, via dsb@dsb.gv.at).

☐ I have understood the information above and I give my consent

Please take a moment to imagine the following situation:

Yesterday evening there was a tense gathering in a nearby town. Some of the people eat meat, some don't, so they naturally started talking about food. Both sides came across as close-minded and felt quite different from each other, because they were discussing their eating habits. The discussion stayed heated till the end. People were angry, used mean words and spoke loudly. When the evening was over, the feeling in the air was heavy. It seems like this talk made people feel upset and divided.

text('A202')

Please take a moment to imagine the following situation:

Yesterday evening there was a relaxed gathering in a nearby town. Some of the people eat meat, some don't, so they naturally started talking about food. Both sides came across as open-minded and felt quite relatable to each other, even though they were discussing their eating habits. The discussion stayed warm till the end. People were friendly, used kind words and spoke calmly. When the evening was over, the feeling in the air was light. It seems like this talk made people feel comfortable and accepted.

A316

In this task you have been randomly paired with another person, whom we will refer to as the other. This other person is someone you do not know and will remain mutually anonymous. All of your choices are completely confidential.

You will be making a series of decisions about allocating fictional resources between you and this other person. For each of the following questions, please indicate the distribution you prefer most by marking the respective position along the midline. You can only make one mark for each question.

Please note that both the money and the person are fictional in this task.

Your decisions will yield hypothetical money for both yourself and the other person. In the example below, a person has chosen to distribute money so that he/she receives 50 dollars/euros, while the anonymous other person receives 40 dollars/euros.

There are no right or wrong answers, this is all about personal preferences. As you can see, your choices will influence both the amount of money you receive as well as the amount of money the other receives.

Example:

30 self 80 other	35 self 70 other	40 self 60 other	45 self 50 other	50 self 40 other	55 self 30 other	60 self 20 other	65 self 10 other	70 self 0 other

A318

In this task, you will be allocating resources between two groups: your own group (non-meat consumers) and an outgroup (meat consumers). These groups represent people with different dietary profiles.

Please note that both the money and the people are fictional in this task.

You will be presented with a series of choices about how to distribute fictional money between the two groups. For each question, please indicate the distribution you personally prefer most by marking a position along the midline. You can only make one mark for each question.

Your decisions will determine how much hypothetical money goes to your ingroup (non-meat consumers) and how much goes to the outgroup (meat consumers). For each group, a randomly selected member will receive the corresponding amount. In the example below, a person has chosen to distribute money so that a randomly chosen non-meat consumer receives 50 dollars/euros, while a randomly chosen meat consumer receives 40 dollars/euros.

There are no right or wrong answers — this task is simply about your personal preferences. As you can see, your choices will influence both the amount of money your group receives as well as the amount of money the other group receives.

Example:

30 ingroup 80 outgroup	35 ingroup 70 outgroup	40 ingroup 60 outgroup	45 ingroup 50 outgroup	50 ingroup 40 outgroup	55 ingroup 30 outgroup	60 ingroup 20 outgroup	65 ingroup 10 outgroup	70 ingroup 0 outgroup

Mammal is "any member of the group of vertebrate animals in which the young are nourished with milk from special mammary glands of the mother." (Encyclopaedia Britannica, n.d., entry: Mammal)

In this task, you will be making decisions about allocating fictional resources between yourself and a mammal, which we will refer to as the other. This mammal is not a specific animal but rather represents mammals in general.

Please note that both the money and the mammal are fictional in this task.

Your decisions will yield hypothetical money for both yourself and the mammal. In the case of the mammal, this money represents resources used to support its well-being — such as food, shelter, or medical care. All of your choices are completely confidential.

For each of the following questions, please indicate the distribution you prefer most by marking the respective position along the midline. You can only make one mark for each question. In the example below, a person has chosen to distribute money so that they receive 50 dollars/euros, while the mammal receives 40 dollars/euros.

There are no right or wrong answers — this is all about personal preferences. As you can see, your choices will influence both the amount of money you receive and the amount allocated to the mammal.

Example:

30 self 80 other	35 self 70 other	40 self 60 other	45 self 50 other	50 self 40 other	55 self 30 other	60 self 20 other	65 self 10 other	70 self 0 other
